

Dental Caries Prevalence after Randomised Fluoride Gel Application

By Karam Hazem Jazrawi

LAP Lambert Acad. Publ. Nov 2011, 2011. Taschenbuch. Book Condition: Neu. 220x150x6 mm. This item is printed on demand - Print on Demand Neuware - This study aims at evaluating the effect on dental caries of acidulated phosphate fluoride gel applied topically with different concentrations (1.23% versus 0.4%), frequencies (once a year versus twice a year versus four times a year), and times of application (4 minutes versus 1 minute) and investigates the scope of topical APF gel effect on initial carious lesions as well as on newly erupted teeth. A sample of (340) school children (177 males and 163 females) initially in the fourth grade (aged 9-11 years) were collected from (4) primary schools in Mosul City Centre. The children were allocated randomly to five experimental groups and one control group. The dental examinations were done using DMFT and DMFS indices: one before fluoride application and the other after one year. The results reveal that the use of such a fluoride therapy as a school-based programme is advised for all children with evidence of dental caries, and is recommended to be planned to match the pattern of eruption of teeth. 108 pp. Englisch.

Reviews

Unquestionably, this is actually the greatest function by any author. I was able to comprehend every little thing using this created e book. Its been printed in an remarkably straightforward way which is merely following i finished reading this ebook in which in fact altered me, alter the way i think.

-- **Arianna Witting**

An exceptional book as well as the font used was exciting to read. It is actually rally intriguing throug reading time. You will not sense monotony at anytime of the time (that's what catalogues are for about when you ask me).
