Book Condition: New. Publisher/Verlag: Springer, Berlin | A Study of Aspartate Transcarbamylase | The study of a single well-chosen substance, here aspartate transcarbamylase, can provide an excellent basis for a laboratory course. The student is introduced to a variety of scientific ideas and to many experimental and interpretive techniques. This enzyme is readily available, is relatively stable, has an extensive literature, and its behavior has many facets: substrate inhibition, a large change in structure upon homotropic activation by substrates, allosteric stimulation by ATP, allosteric inhibition by CTP synergistic with VTP, positive cooperativity for substrates, negative cooperativity for CTP binding, and dissociation and reassembly of subunits C and R from the holoenzyme C₃R₃. In addition to the known biochemical aspects of these properties, the results obtained here can be interpreted in the light of the high-resolution X-ray diffraction structures of the T and R forms, the low-angle X-ray scattering results, and the large number of mutants now available by recombinant DNA methods. Future development of this course could also involve part of these methods, as well as the carefully chosen experiments described here. This approach resembles research more than the approaches one usually finds in biochemical laboratory courses. A consistent development of ideas about a single enzyme, which shows so many facets in its behavior, is sure to hold the interest of the student. Moreover, one explores a depth, and reasons to move forward, that are an essential part of research. | 1 Aspartate Transcarbamylase.- 2 Molecular Genetics: Regulation of Aspartate Transcarbamylase Biosynthesis.- 3 Purification of Aspartate Transcarbamylase and Its Subunits.- 4 Structural and Physicochemical Study of Aspartate Transcarbamylase.- 5 Enzymatic Catalysis and Regulation.- 6 Complementary Experiments.- 1. Equations and Units.- 2. Molar Mass and Molecular Mass.- 3. Units of Catalytic Activity.- 4. Units...
