Excerpt: .in which it was formed, and soon elongates and thickens until its lower end pushes down into the end of Fig.218 An antheridium (a) of a moss. From its tip the sperms (b) are escaping, and one of them is shown enlarged at the side (c). a and b, magnified 350 times; c, magnified 800 times. After Sachs the stem upon which the archegonium grew. This gives the lower end a foothold in the stem, and by reason of its close contact this end, or foot as it is called, absorbs food material from the stem. The young stalk also bears chlorophyll and may manufacture some of its own food. The upward end elongates rapidly and carries up with it the old archegonium wall, which meantime has grown somewhat (Figs. 216 and 219). This elongated structure is called the seta, which means a bristle...

Totally one of the better pdf I have at any time read through. It really is simplified but shocks within the 50 % from the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.
